

SKILLS

- **Programming Languages:** Python, Java, C++, SQL, Bash/Shell scripting
- **Web & API Development:** Flask, FastAPI, REST APIs, HTML/CSS, Node.js, Express.js, TypeScript, React
- **Data & Big Data Technologies:** Apache Spark, ETL, PostgreSQL, MySQL, MongoDB, Redis, SQLite, WebSocket.
- **Cloud & Infrastructure:** AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD, Terraform.
- **Software Engineering & ML:** Data structures, Microservices, Distributed Systems, Git, GitHub, Algorithms, JWT + OAuth, OOP
- **Collaboration & Methodologies:** Agile, Scrum, cross-functional teamwork, technical writing, problem-solving

WORK EXPERIENCE

Analyst – I

Accelya Solutions, Mumbai, Maharashtra, India

Dec 2022 – Jul 2024

- Optimized system performance by 30% by identifying inefficiencies across distributed data processing pipelines. Analyzed bottlenecks in data processing and debugging workflows, then implemented design patterns and ETL optimizations using SQL, MySQL, Python, and Databricks.
- Resolved 150+ software issues by enhancing debugging strategies. Led post-incident root cause analysis (RCA) across distributed services, introduced SLI-driven debugging workflows reducing mean time to resolution by 25% and improving service reliability SLOs.
- Spearheaded deployment of 8+ minor releases annually, ensuring seamless upgrades with minimal downtime. Developed automated testing, canary validation, and rollback strategies, improving user satisfaction by 15% through smoother feature rollouts.
- Improved testing strategies and cross-functional collaboration by implementing CI/CD best practices and fostering team synergy. This resulted in better development workflows and increased team productivity, reducing integration errors and enhancing software quality.

Software Developer

Static Int, Mumbai, Maharashtra, India

Jun 2022 – Sep 2022

- Enhanced code reliability by 40% by developing and automating testing workflows. Identified 30% gaps in existing test coverage and implemented Python-based automation scripts and reducing production defects by 35%, leading to improved software stability.
- Optimized backend performance, improving query execution speed by 50% and reducing API response times by 30%. Analyzed system bottlenecks, restructured 100+ database queries, and implemented caching mechanisms, enabling high-speed, efficient processing and enhancing application efficiency.
- Designed scalable test automation frameworks that streamlined deployment, reducing manual testing efforts by 60%. Developed modular, reusable testing architectures, accelerating release cycles by 40% and improving overall system stability.

PROJECT EXPERIENCE

GlucoAI (React, Node.js, Express, SQLite, Anthropic Claude API, Tesseract.js OCR, REST API, RAG)

May 2026

- Architected a full-stack AI dietary guidance web app for diabetic patients using React, Node.js, Express, and SQLite, with ADA-compliant glucose classification and a patient profile system that contextualizes every AI response with live glucose level, diabetes type, and allergy data.
- Engineered 4 Claude AI prompt pipelines for real-time glucose-aware meal recipe generation, ingredient safety analysis, sugar estimation, and daily dietary insights grounded in ADA guidelines via RAG.
- Built a computer vision ingredient safety checker using Tesseract.js OCR to extract nutrition label text from photos and return personalized Safe / Caution / Do Not Buy verdicts cross-referenced against the patient's glucose level, diabetes type, and allergies via Claude AI.
- Delivered a patient-confirmed food and sugar log with partial portion tracking, real-time ADA-limit comparisons, and a 12-endpoint REST API managing profiles, glucose history, food logging, and Claude AI orchestration across a normalized SQLite database.

BloodBridgeAI (Python, FastAPI, React, PostgreSQL, Twilio Voice API, Twilio SMS, Google Maps API, JWT)

Apr 2026

- Architected a 3-agent AI system using Python, FastAPI, and PostgreSQL to automate emergency blood donor coordination, ranking donors by blood compatibility, past emergency response history, and the 56-day donation gap requirement.
- Built an AI Voice Assistant using Twilio Voice API that autonomously calls the top 5 ranked donors, captures ETA and fitness responses, and auto-escalates on no response or rejection using Redis queue management.
- Developed a real time hospital dashboard using React and WebSocket with live donor status, ETA tracking, and automated directions delivery via Twilio SMS and Google Maps API, prioritizing the closest confirmed donor.
- Secured 1st place in Best Use of AI in Healthcare at Scarlet Hacks 2026 by delivering a production ready MVP with JWT role-based access control, consent based location sharing via signed links, and full audit trails in PostgreSQL.

AI Job Application Tracker (TypeScript, MERN, Google Gemini AI, JWT, REST APIs, Puppeteer, Netlify, Heroku)

Jan 2026

- Architected a full-stack AI-powered job tracker using React Node.js & Express REST API backed by MongoDB, enabling users to manage applications across a 5-stage Kanban pipeline with real-time status tracking.
- Integrated Google Gemini AI to auto-extract job details from URLs, tailor CVs to specific job descriptions, generate personalized cover letters, and score ATS compatibility reducing manual application prep time by 70%.
- Built a Gmail automation engine that polls inboxes every 15 minutes, uses LLM classification to detect rejections, interview invites, and offers, and fuzzy-matches emails to tracked applications with a confirm-before-apply workflow.
- Implemented JWT + Google OAuth 2.0 authentication, Cloudinary-backed file storage, Puppeteer PDF generation, and deployed the full stack to Netlify and Heroku with CI/CD via GitHub Actions.

AI Dietician: Smart Diet Planning (Pandas, NumPy, Firebase, JavaScript, REST APIs, Google Cloud Platform.)

Sep 2025

- Developed an AI-powered diet planning system, increasing personalized meal plan accuracy by 85%. Identified the need for a data-driven approach to nutrition and implemented machine learning algorithms that improved diet recommendation efficiency by 60%.
- Integrated Google Dialogflow and Firebase, enabling smart meal tracking with 95% reminder accuracy. Designed a voice/text-based interface, leading to a 40% increase in user engagement and improving accessibility for diverse users.
- Architected a modular, scalable system supporting fitness tracker and social feature integrations, boosting user retention by 50% and ensuring long-term viability.

Smart Hospital Management System (Python, Flask, MySQL, REST APIs, HTML/CSS, scikit-learn, Docker)

Nov 2024

- Built a smart healthcare platform that cut appointment scheduling time by 40% and boosted doctor-patient interaction efficiency by 50%, enabling seamless booking, rescheduling, and cancellations at scale.
- Architected secure MySQL databases and Flask authentication to ensure 100% compliant medical record storage and reliable cashless payment processing across 500+ monthly transactions.
- Delivered AI-driven analytics dashboards and location-based doctor recommendations, lifting decision-making efficiency by 35% and patient engagement by 60%.

EDUCATION

- Masters in Computer Science, Illinois Institute of Technology.
- Bachelor of Engineering in Computer Engineering, University of Mumbai.

May 2026

Jun 2022

ACHIEVEMENTS

- Secured first place in the Best Use of AI in Healthcare track at ScarletHacks 2026 hosted by ACM Illinois Tech.
- Secured first place in the Terraform Gameday Challenge, mentored by industry experts from HashiCorp.
- Participated in Google Chrome Built-in AI Challenge 2025
- Participated in Hackathon Organized by IEEE
