

WORK EXPERIENCE

Analyst I - Accelya Solutions, India

Dec 2022 – Jul 2024

- Optimized distributed data processing pipelines by identifying inefficiencies, achieving a 30% system performance increase and improving data reliability by detecting the three biggest causes of pipeline failures.
- Orchestrated post-incident root cause analysis across distributed services, establishing SLI-driven workflows that reduced mean time to resolution by 25%.
- Engineered robust automated testing, canary validation, and rollback strategies to guarantee smooth feature rollouts, boosting user satisfaction by 15%.
- Elevated testing strategies and cross-functional collaboration by implementing CI/CD best practices, resulting in a 25% reduction in integration errors and improved software quality.

Software Developer - Static Int., India

Jun 2022 – Sep 2022

- Rectified 30% gaps in code coverage by creating Python automation scripts, resulting in a 35% reduction in production defects and greater software stability.
- Streamlined database operations by analyzing bottlenecks and restructuring 100+ queries, boosting query execution speed by 50% and enhancing application efficiency.
- Designed scalable test automation frameworks that streamlined deployment, reducing manual testing efforts by 60%. Developed modular, reusable testing architectures, accelerating release cycles by 40% and improving overall system stability.

PROJECT EXPERIENCE

GlukoAI

May 2026

- Architected a full-stack AI dietary guidance web app for diabetic patients using React, Node.js, Express, and SQLite classifying glucose across 4 levels and 4 meal contexts per ADA standards, with a patient profile system injecting live glucose, diabetes type, and allergy data into 100% Claude AI responses.
- Designed 4 Claude AI prompt pipelines for meal recipes, ingredient safety, sugar estimation, and daily insights, grounding all responses in 1,788 ADA 2026 guideline chunks.
- Launched an ingredient safety checker with Tesseract.js OCR to extract nutrition label text from photos in under 3 seconds, classifying user risk against 4 glucose levels.
- Produced a 12-endpoint REST API, normalizing six core SQLite tables including glucose history and AI recommendations, ensuring secure access through JWT and real-time Claude AI orchestration.

BloodBridgeAI

Apr 2026

- Engineered a 3-agent AI coordination system with Python, FastAPI, and PostgreSQL, prioritizing donors by compatibility, past emergency response, and strict 56-day donation gap requirements.
- Built an AI Voice Assistant using Twilio Voice API that autonomously calls the top 5 ranked donors, captures ETA and fitness responses, and auto-escalates on no response or rejection using Redis queue management.
- Expedited emergency response by 30% through a real-time dashboard displaying live donor status, ETA tracking, and automated directions via Twilio SMS and Google Maps API.
- Secured 1st place in Best Use of AI in Healthcare at Scarlet Hacks 2026 by delivering a production ready MVP with JWT role-based access control, consent based location sharing via signed links, and full audit trails in PostgreSQL.

AI Job Application Tracker

Jan 2026

- Designed a full-stack AI-powered job tracker using React Node.js & Express MongoDB, streamlining application management across a 5-stage Kanban pipeline with live status updates.
- Integrated Google Gemini AI to auto-extract job details from URLs, tailor CVs to specific job descriptions, generate personalized cover letters, and score ATS compatibility reducing manual application prep time by 70%.
- Designed a Gmail automation engine polling inboxes every 15 minutes, leveraging LLM classification for rejections, interview invites, and offers, ensuring 98% accuracy in status detection.
- Implemented JWT + Google OAuth 2.0 authentication, Cloudinary-backed file storage, Puppeteer PDF generation, and deployed the full stack to Netlify and Heroku with CI/CD via GitHub Actions.

SKILLS

- **Programming Languages:** Python, Java, C++, SQL, Bash/Shell scripting
- **Web & API Development:** Flask, FastAPI, REST APIs, HTML/CSS, Node.js, Express.js, TypeScript, React
- **Data & Big Data Technologies:** Apache Spark, ETL, PostgreSQL, MySQL, MongoDB, Redis, SQLite, WebSocket.
- **Cloud & Infrastructure:** AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD, Terraform.
- **Software Engineering & ML:** Data structures, Microservices, Distributed Systems, Git, GitHub, Algorithms, JWT + OAuth, OOP
- **Collaboration & Methodologies:** Agile, Scrum, Cross-Functional Teamwork, Unit Testing, Integration Testing

EDUCATION

- **Illinois Institute of Technology** Chicago, Illinois
Master's in Computer Science May 2026
- **University of Mumbai** Mumbai, India
Bachelor of Engineering in Computer Engineering Jun 2022
